1. Introduction

The **Orangetcat Purchase Order** module for Magento 2 introduces a robust B2B purchasing workflow. It allows companies to control spending by implementing purchase limits and an approval process for orders.

Key features include:

- Automated Purchase Order creation based on company/user limits.
- Manager approval workflow for orders exceeding limits.
- Detailed activity logging for every Purchase Order.
- Buyer-specific spending limits per transaction and per period.

2. Configuration

2.1. Global Settings

Admin settings can be accessed under **Stores > Configuration > Orangetcat > Company > Purchase Orders**. Here you can enable the module globally and configure general parameters.

2.2. Buyer Limits

Specific limits for each buyer can be configured in the company user management section. These limits determine if an order requires approval.

3. Buyer Workflow

3.1. Creating a Purchase Order

When a buyer places an order that exceeds their established limits, the system automatically creates a Purchase Order instead of a direct Magento Order. The buyer is notified on the success page.

3.2. My Purchase Orders

Buyers can track their pending, approved, and rejected purchase orders from the **My Purchase Orders** section in their customer account.

Figure 3.2: Personal Purchase Order List

3.3. Purchase Order Details

Buyers can view the details of their purchase orders, including items, totals, and the current status.

4. Company management Workflow

Company Managers have the authority to review and action purchase orders submitted by their team members.

4.1. Managing Company POs

Managers can access all company purchase orders via the **Company Purchase Orders** menu. This view provides a complete overview of the company's pending acquisitions.

4.2. Reviewing PO Details

A detailed view of the Purchase Order allows managers to verify items and check the **Activity Log** to understand the history of the document.

4.3. Approval Process

To approve a Purchase Order, the manager clicks the "Approve" button and can provide a comment. Once approved, the Purchase Order is automatically converted into a standard Magento Order.

4.4. Rejection Process

If a Purchase Order is not suitable, the manager can reject it, providing a reason for the buyer to review.
